(continued from page 1)

*P3a. Description:

Located at the façade is a partial-width porch with a shed roof supported by one slim round painted column (probably steel) and one painted brick pillar. The entry consists of a single wood and glass door. There is also a screened porch with a shed roof located on the east elevation. The residence has seven windows on the façade. They are asymmetrically spaced and consist of six pairs of small steel casement windows. To the south of the entry door is a large steel casement window. Other windows throughout the residence consist of pairs of steel casement windows. All of the windows have multiple lights and decorative brick surrounds and sills.

Landscaping elements include mature lawns, trees and established flower beds surrounding the residence. This includes a mature pepper tree at the southeast corner of the residence. Other features include an attached two-car garage, a concrete pedestrian walkway to the front porch, brick planters at the sidewalk as well as across the façade, a wooden fence bordering the rear yard, and a metal storage shed.

There are no visible alterations. The condition of the building is good.

□ Continuation

Update

(continued from page 1)

*P3a. Description:

The primary entry is at the façade. It consists of a single wood door approached by a modern wood deck. There is an aluminum screen on the entry door. There are twelve windows on the façade. They are asymmetrically spaced and consist of a three-window bay of tall, narrow double-hung wood-sash windows and three banks-of-three double-hung aluminum-sash windows. Other windows throughout the residence consist of single and paired double-hung wood-sash windows. All of the windows have wood casings and sills.

Other elements of this residence include fishscale shingles in the front facing gables, decorative brackets and finials on the bay window, and rain gutters.

Landscaping elements include mature lawn and shrubs. Other features include a steeply-pitched roof shed with horizontal wood siding of unknown use, probably a one-car detached garage. The residence is surrounded with a combination of wood and chain-link fencing.

The condition of the building is excellent to good. Alterations to the building include a significant addition to the façade that consumed the original porch and added square footage to the original house. A wood deck was added to replace the front porch.

View looking south at the north elevation

View looking at the southeast section of the facade

CONTINUATION SHEET		

*Resource Name or # (Assigned by recorder) 15503 Cranmore Road, Kirkville

Recorded By: Phyllis Smith Date: April, 2006 ☐ Continuation ☐ Update

(continued from page 1)

*P3a. Description:

The primary entry is located at the façade. It consists of a full-width porch with a secondary dropped side-gabled roof. The porch has heavy piers and solid concrete balustrade/rails. The stairs are concrete. The single door is wood and glass. There are several windows on the façade. They are asymmetrically spaced and consist of double-hung wood-sash windows with two panes and single paired windows. Other windows throughout the residence are not visible.

Landscaping elements include mature trees, shrubs, grass and a walnut orchard. Other features include a gravel driveway, a white fence surrounding the property (with no gate), a new detached three-car garage, and a shed in the back yard.

The condition of the building is excellent to good. There are no visible alterations.

View looking west at the east elevation of the shed

*Resource Name or # (Assigned by recorder) 17511 Cranmore Road, Knights Landing

Recorded By: Phyllis Smith Date: April, 2006 Continuation Update

(continued from page 1)

*P3a. Description:

The primary entry is at the façade. It consists of a full-width enclosed porch sheltered by the principal roof. The porch roof is supported by slightly tapered wood rectangular posts. The balustrade is clad with horizontal wood boards. Wood steps and landing, with low wood rails, lead to a wood screen door. Beyond the screen door is a single wood-paneled door with a single light. They are two sets of wood-sash windows located at the façade. The other windows throughout the residence consist of double-hung wood-sash windows, including a pair that are within an angled bay with a shed roof located at the south elevation.

Landscaping elements include mature trees, shrubs and grass. Other features include a gravel driveway, as well as a wood post at the front of the property with the house number and a wood plaque with the engraving "Kramer Ranch est. 1895." A two-story wood tankhouse with a pyramidal hipped roof is located to the southwest of the house, and is adjacent to the levee on the Sacramento River. There is also a three-car garage south of the tankhouse, and a corrugated metal and gable-roofed barn located at the south section of the property.

There is an early porch enclosure, likely from the 1920s. The condition of the residence is good.

*P3a. Description:

The primary entry is located at the façade. It consists of a full-width porch under the principle roof. The porch has a wood lap-siding balustrade with "eyebrow" drain openings and tapered square columns. There is a single wood door. The porch steps and rails are wood. There are five windows on the façade. They are asymmetrically spaced and consist of five double-hung wood-sash windows all located on the façade. There are two pairs of windows on either side of the door and a single one located to the far right side of the porch. All of the windows have wood casings and sills. Other windows throughout the residence consist of double-hung wood-sash windows with wood casings and sills. Other elements of this residence include wood brackets on the gable ends and rain gutters.

Landscaping elements include mature lawn, trees, and shrubs including low boxwood hedges bordering the front walkway, porch and yard. Other features include an asphalt driveway and a concrete walkway.

The condition of the building is excellent to good.

Update

(continued from page 1)

*P3a. Description:

The primary entry is located at the façade. It consists of a full-width porch under the principle roof. The porch has four columns; two appear to be original and are large tapering square columns at the outside edges of the porch. The two that flank the center door appear to have been replaced by smaller, straight wood pillars. There is a wood post and rail balustrade with a wood porch deck; there are concrete steps that lead to the porch. The single door is wood and has a screen door. There is a secondary entry in the north elevation; it consists of a wood and glass single door with a screen door.

There are ten windows on the façade. They are symmetrically spaced and consist of six double-hung wood-sash windows on the porch and four multi-light windows in the dormer. To the left of the entry is a pair of windows with the third and farther outside window located at an angle to the porch. To the right of the entry is a three-window bay. Other windows throughout the residence consist of a combination of double-hung wood-sash windows and double-hung vinyl-sash windows. The two main windows in the north elevation have decorative lintels and sills. All windows have wood casings and sills.

Other elements of this residence include wood shingles in the gable peaks with wood louvers and a small three-over-one light window, bird's-beak extended rafters and eaves, and rain gutters.

Landscaping elements include mature lawn, trees and shrubs including mature citrus trees, camellia bushes and a vivid blue Ceanothus (California Wild Lilac). There are mature grape vines and arbors at the north elevation. Other features include a gravel driveway, concrete walkway, wood fence on the north, and granite caps on the concrete porch step balustrades.

The condition of the building is excellent to good. Alterations to the building include an early major addition attached to the rear of the house in the 1930s and a second addition to the northeast corner of the first addition in more recent years.

View looking south at the north elevation

View looking southeast at the barn

21448 Cranmore Road, Knights Landing

Recorded By: Carol Bordeaux

Date:

April, 2006 Continuation

Update

(continued from page 1)

*P3a. Description:

The primary entry is located at the west facing façade. It consists of a partial-width porch with a secondary roof supported by a probable but not visible single column at the northwest corner. The porch deck is concrete as are the porch steps. The porch has a stucco balustrade with eyebrow drains. The entry is a single wood door with a large glass oval window. There are eleven windows on the façade. They are asymmetrically spaced and consist of ten double-hung wood-sash windows of several sizes and one fixed window in the dormer. There are two pairs and a single large-sized window on the second floor, two small windows to the right of the entry, and one oversized window flanked by two smaller windows on the porch. Other windows throughout the residence consist of a combination of double-hung wood-sash windows. On the south elevation there are two "square bay" windows that have extended shed-style roofs. All of the windows have wood casings and sills.

Landscaping elements include an extensively designed garden enclosed by a low iron and concrete block fence. The garden includes numerous mature trees including a Picea Glauca (Colorado blue spruce), shrubs including many evergreens, and flower beds. There are concrete walkways and winding stepping stones throughout the garden which also includes numerous pieces of garden art. Other features include a concrete driveway and a gravel driveway, an attached two-car garage, a detached two-car garage, a shed, and a corrugated metal implement barn.

The condition of the building is good. Alterations to the building include the major addition of a room and attached two-car garage to the north elevation. The second floor siding is not original. The south side of the front porch has been enclosed to create a new room, which is likely a bathroom.

View looking north at the south elevation

View looking south at the north elevation of the garage

Update

(continued from page 1)

*P3a. Description:

The primary entry is located at the façade. It consists of a partial-width porch sheltered by the principal roof and located at the northwest corner of the façade. The porch has brick steps and landing, and is approached through a round stucco arch. The single door is wood. There are six windows on the façade. They consist of two small and two larger aluminum sliding windows, and two fixed aluminum windows all placed together to form one large picture window. The other windows throughout the residence consist of a combination of aluminum sliding and double-hung windows. There is also a square bay located at the west elevation. All the windows have flared stucco lintels and narrow wood casings.

Landscaping elements include a mature lawn, shrubs and trees, and there are well-planted flower beds bordering the residence. Other features include a detached one-car stucco garage that mirrors the house. This garage is attached to the mirror image garage for 4704 Del Monte Avenue, making it a double-gabled building. There are also concrete pedestrian walkways and wood fences on the property.

Alterations to the building include replacement windows. The condition of the building is good.

*P3a. Description:

The primary entry is located at the façade. It consists of an enclosed partial-width porch sheltered by an extended secondary steeplypitched gabled roof with half-timber details. A concrete landing leads up to a single wood door with Tudor style hardware and decorative hinges. There are four windows on the façade. There are three double-hung wood-sash windows placed together on the east side of the façade. On the west side is a single double-hung wood-sash window. Each of the windows has eight-over-eight lights. The other elevations also consist of double-hung wood-sash windows with multiple lights. Each of the windows has a flared stucco lintel with a wood sill and narrow wood casings.

Landscaping elements include generally immature trees, shrubs and lawn. Other features include a detached one-car stucco garage that mirrors and is attached to the garage for 4700 Del Monte Avenue, making it a double-gabled building. The residence has concrete pedestrian walkways, and both chain link and wood fences.

The exterior was reclad and one window on the west elevation has been stuccoed in. The condition of the building is good.

*P3a. Description:

The primary entry is located at the façade. It is located within a rectangular recessed opening under the principal roof, with concrete steps and landing. The entry has a single wood door with a small four-light window. There appear to be French wood and glass doors located at the south (rear) elevation. There are three windows on the façade. They are wood casement windows with twelve lights per sash. The window within the façade gable is located within a round arched inset. The other windows throughout the residence consist of a combination of double-hung wood-sash and casement windows. None of the windows have casings but most have a masonry sill.

Landscaping elements include a lawn, numerous trees, and both mature and immature shrubs. There is a vine-covered pergola to the east elevation. Other features include a detached one-car garage, also clad in stucco, and concrete walkways. There is wood plank fencing enclosing the east, south and west sides of the property.

There are no apparent alterations to the building. The condition of the building is good.

(continued from page 1)

*P3a. Description:

The primary entry is located at the center of the façade. It consists of a partial-width shallow recessed porch sheltered by the principal roof. It has double wood and glass doors topped by a large single glass transom. The porch surround is faced by quoined columns, each with a Corinthian order capital. Above the doors is a decorative panel with acanthus leaf details with a shield in the center inscribed with the words "Sutter Basin Company." The panel is flanked by pilasters on either side and topped by a cornice. The porch has a concrete landing and concrete entry steps with metal railings. There is one Spanish Colonial Revival-style light fixture adjacent to the entry. There appear to be three entrances at the south (rear) elevation. One is located at the center of the elevation and consists of a wood paneled replacement door with a fanlight. The door is sheltered by a dropped secondary shed roof supported by knee brackets and clad with Spanish clay tiles. It has a concrete step and landing. There appears to be another entry at the west end of the rear elevation, located within an enclosed porch with a shed roof. A third entry on this elevation was formerly located at the east end, but has been filled in with stucco.

There are eight windows at the façade. They are symmetrically spaced and have double-hung wood-sash windows. The sashes are one-over-two, and the windows have masonry sills. The windows at the east elevation are the same. The rear elevation also has the same windows, as well as windows that are one-over-one double-hung wood-sash, and replacement louvered windows. There are also windows that have been filled in with stucco.

Landscaping elements include a mature lawn, trees and shrubs including Mahonia Aquifolium (Oregon Grape). Other features include an asphalt and gravel driveway at the south elevation and a concrete walkway leading from the road to the front entry.

Alterations to the building include door and window openings that have been filled in on the rear elevation. There are also two replacement windows on this elevation. The enclosed porch at the rear is also not original, and the circular openings at this elevation may have been filled in. The condition of the building is good.

(continued from page 1)

*P3a. Description:

The primary entry is located at the west end of the façade. It consists of two secondary partial-width porches, each with a steeply-pitched gabled roof clad with composition shingles. The porches have light fixtures mounted within the gables and have shared concrete paving. They are supported by stuccoed posts. The porch on the east side of the façade is attached to a secondary shed roof. The west section porch has a single glass and metal entry door. The door and window for the other storefront have been filled in. There is another identical partial-width porch with a steeply-pitched gabled roof located at the west elevation. The entry for this has also been filled in. The residence is accessed at the east elevation by a set of wood stairs leading up to a single door. There is one window on the façade that consists of a two-light fixed pane wood-framed window with metal grill work on the inside and a wood sill. The other windows consist of mostly wood-sash double-hung and casement windows. There are also aluminum sliders. These single or paired windows have wood sills.

There is an asphalt parking lot located on the west side of the property.

Alterations to the building include the restuccoing of the exterior. It is also likely that the building originally had two storefronts, with a gas station located at the east half of the façade. This resulted in the stuccoing over of doors and windows. Also, the current façade window appears to date from the 1950s, and likely filled in a larger window. It is also possible that the shed roof and the gabled roofs at the porch were originally clad with Spanish clay tiles. The two-story living quarters is likely an early addition. The condition of the building is good to fair.

CONTINUATION SHEET

Primary	#			
HRI				

*Resource Name or # (Assigned by recorder) 16589 Jewett Road, Yuba City

(continued from page 1)

*P3a. Description:

The primary entry is located at the façade. It consists of a full-width extended-roof porch supported by four brick columns. The porch floor is concrete and the steps to the entry door are brick. The single wood door has a small glass window. There are nine windows on the façade. They are symmetrically spaced and consist of two wood combination windows on the front porch. Each consists of a single fixed divided-light window flanked by two small single-hung sash windows. Additionally, there are three double-hung wood-sash windows in the dormer above the porch. Other windows throughout the residence consist of a combination of double-hung wood-sash windows and aluminum sliding windows. There is a band of multi-paned casement windows on the west elevation. All windows have wood casings and sills.

Landscaping elements include lawn, trees and shrubs, both mature and immature. Other features include a gravel driveway and concrete walkways.

The condition of the building is good to fair. Alterations to the building include replacement windows on the south elevation.

(continued from page 1)

*P3a. Description:

The primary entry is located at the north elevation and is approached by a concrete parking pad and brick steps. It consists of a partialwidth, dropped porch roof clad in clay tile and supported by knee-brackets. The single entry door is wood with a wood screen door. There is a secondary entry at the façade. It consists of a full-width, dropped roof porch supported by posts with decorative brackets and a brick landing with concrete steps. The secondary entry has a single wood door with ten lights and a wood screen door; it is flanked by ten-light sidelights. There is an additional entry on the south elevation that consists of a single carved wood and leaded glass replacement door with leaded glass sidelights.

There are seventeen windows on the façade. They are symmetrically spaced and consist of eleven three-light wood single-hung windows set in pairs except for the one over the secondary entry, which is set as a triple, and six ten-light wood windows on the secondary porch set in triples on either side of the secondary entry. Other windows throughout the residence consist of a combination of three-light single-hung wood-sash and double-hung vinyl-sash and sliding windows in the west elevation. All of the windows have wood casings and sills. In addition, on the west elevation there are three arch-topped French-door windows with sixteen lights. Two of these appear to be the wood originals and one a replacement vinyl. Other elements of this residence include two decorative vents in the west elevation at the first floor level, square attic vents in each of the gable ends, exterior light fixtures (mostly original) and rain gutters.

Landscaping elements include mature lawns, trees and shrubs including a hedge-enclosed courtyard on the façade. Other features include an asphalt driveway and a low masonry-walled garden on the south elevation.

Alterations to the building include replacement of some windows with vinyl windows and replacement of the door on the south elevation. The condition of the building is good.

(continued from page 1)

*P3a. Description:

The primary entry is located at the east elevation. It consists of metal stairs with metal rails that lead to a concrete-floored deck and an entry at the second floor level. The entry is a single five-paneled wood door located within a bank of five windows. There are five windows on the east elevation. They are symmetrically spaced and consist of three steel sixteen-light casement windows over the entry door which is flanked by two steel 32-light casement windows. Other windows throughout the pumping station consist of three banks of six windows on each of the north and south elevations. Each bank of windows consists of three steel sixteen-light casement windows over three steel 32-light casement windows. On the west elevation there is an additional bank of similar casement windows. Other elements of this pumping station include a steel encaged ladder to the north of the entry door that leads to the roof and a concrete addition to the north elevation with apparent drive-through service doors. Decorative elements of this building include poured-in-place concrete pillasters flanking either side of the casement windows and a four-tired concrete cornice.

Landscaping elements include mature trees. Other features include concrete walkways, suspended metal walkways and metal hand rails as well as a secondary pumping station located to the north of the main pumping station facing east. That building was constructed in 1924 in the Neo-Classical Revival style. This one-story pumping station has a rectangular floor plan. The building has a symmetrical façade and sits on a concrete foundation. The pumping station has a similar construction to the primary building but sits on the edge of the levee with part of the building extending into the river. The primary entry is located at the façade. It consists of solid single entry door placed within a bank of windows. There are six windows on the façade. They are symmetrically spaced and consist of three twelve-light windows placed over two 28-light windows which flank an eight-light window over the entry door. All of the windows are steel casement windows. Other windows throughout the secondary pumping station consist of steel casement windows similar to those in the façade. Other elements of this pumping station include a large steel abutment structure located in the middle of the building and in front of the entry.

Alterations to the building include replacement stairs. The condition of the building is good to fair.

*P3a. Description:

The primary entry is located at the western façade. It consists of a partial-width porch, sheltered by a secondary extended roof with smooth stucco-clad supports and balustrade. The landing and steps are brick, and the step rail is metal. The single entry door is arched wood with metal-strap hardware and a metal-covered window opening and an arched exterior screen door. A decorative square niche is also located to the south of the front door. There are eleven windows on the façade. They are symmetrically spaced and consist of five pairs of eight-light metal casement windows, nine of which are topped with a fixed arched multi-pane metal window. There is also a single six-light metal casement window above the porch, topped by a fixed two-light arched metal window. Other windows throughout the residence consist of a combination of paired eight-light metal casement windows, two of which are topped by a six-light fixed metal window. There are also two six-light metal windows on the east elevation indicating the presence of at least a partial basement. All of the windows have wood sills. Other elements of this residence include an original light fixture at the entry.

Landscaping elements include mature lawns, trees and shrubs. Other features include a gravel driveway at rear of the house, a detached stucco garage clad in clay tiles, and a redwood fence with decorative scallops and posts in the side yard and enclosing the back yard.

Alterations to the building include metal rain gutters. The condition of the building is excellent.

*P3a. Description:

The primary entry is located at the façade. It consists of a partial-width brick porch with concrete steps and brick balustrade. The entryway is sheltered by a secondary gable roof with decorative "half-timbered" embellishment and supported by a brick entry arch. A single wood door with a diamond-shaped window inset is located under the secondary roof. There are three windows on the façade. They are asymmetrically spaced and consist of two double-hung steel-sash windows with three and four lights over a single light. The third façade window is a diamond-shaped stained glass window with blue, green, and red colored glass located below the east gable. Other windows throughout the residence consist of double-hung steel-sash windows with three lights over a single light, hung both as singles and pairs. There is also one small steel sliding window on the west elevation.

Landscaping elements include front and side lawns with a mixture of mature and immature trees and shrubs. Other features include a concrete sidewalk, pedestrian pathway and wooden side yard fences. There is also a detached garage to the north.

Alterations to the building include replacement of windows and an apparent addition to the north elevation of the residence. The condition of the building is good.

*Resource Name or # (Assigned by recorder) 4736 Santa Rosa Avenue, Robbins

Primary # HRI

Recorded By: Carol Bordeaux April, 2006 Update

(continued from page 1)

*P3a. Description:

The primary entry is located at the façade. It consists of a secondary partial-width, fully-enclosed porch, sheltered by a dropped gable roof, with a wood screen door. The entry door is solid wood with an exterior aluminum screen door. The porch has concrete steps and a probable concrete landing. There are two windows on the façade. They are symmetrically spaced and consist of two aluminum sliding windows. Other windows throughout the residence consist of a combination of double-hung wood-sash and aluminum sliding windows. The windows have wood casings and sills. The aluminum replacement windows have wood casings and a wood "filler" panel beneath each window (to allow the new windows to fit the older openings).

Landscaping elements include mature trees and grass. Other features include a concrete driveway, concrete pathways and a detached garage with a newer addition on the east elevation.

Alterations to the building include asbestos shingle siding, aluminum sliding windows and possibly the front porch. The condition of the building is good to fair.

Recorded By:	Carol Bordeaux	Date:	April, 2006	■ Continuation	Update

(continued from page 1)

*P3a. Description:

The primary entry is located at the façade. It consists of a partial-width porch sheltered by a secondary dropped front-gabled roof. The front porch supports, landing, steps and door are obsured by overgrown ivy and are not visible. However, an exterior aluminum screen door covering the main entry is visible. The porch gable has unfinished vertical wood siding. The residence has a secondary entry at the east elevation near the rear of the house with a single wood and glass door. There are two windows on the façade. They are asymmetrically spaced and consist of two-light double-hung wood-sash windows. Other windows throughout the residence consist of double-hung wood-sash windows and one eight-light fixed wood window on the east elevation. All of the windows have wood casings and sills. The residence also has a light fixture located at the secondary entrance.

Landscaping elements include mature grass and shrubs, an immature palm tree and a bed of calla lilies located along the east elevation. Other features include a concrete driveway, concrete pathways, and a detached garage with a concrete block addition.

Alterations to the building include the application of stucco (most likely over original wood siding), vertical siding applied to the front porch gable and a hipped roof addition to the rear of the residence. The condition of the building is fair to poor.

*P3a. Description:

The primary entry is located at the façade. It consists of a partial-width porch sheltered by a secondary dropped flat roof, supported by simple round columns. The porch roof is topped by a false metal balcony. The entry door is obscured by a louvered panel. There are two windows on the façade. They are symmetrically spaced and consist of two double-hung wood-sash windows with corrugated aluminum awnings. Other windows throughout the residence consist of a combination of double-hung wood and vinyl-sash windows. There is one newer metal awning on the east elevation. Other elements of this residence include a pergola over a secondary entry that is obscured by a louvered panel on the east elevation and an attached enclosed porch at the north elevation. The residence also appears to have downspouts located above each façade window awning.

Landscaping elements include a lawn, brick planters, and mature trees and shrubs. Other features include a newer detached garage, gravel driveway, split rail fence and concrete parking pad.

Alterations to the building include louvered door-covering panels, the façade window awnings, and some replacement windows. The condition of the building is good.
